

FORGE & FLOW
BUSINESS
PLAN

Our Story

Forge & Flow is a forward thinking software company designed specifically for the restaurant industry, merging technology and industry expertise to create a unique KPI dashboard and learning center. This software seamlessly integrates with existing POS systems and other technology solutions, such as reservation and scheduling apps. By harnessing 60 days of data, Forge & Flow calculates benchmark targets that empower operators to make informed, proactive decisions. This approach shifts the focus from instinct-driven choices to data-backed strategies, enhancing operational efficiency and improving overall guest experiences.

One of the most pressing challenges restaurant operators face is the cycle of reactive decision-making, particularly in managing labor costs. Traditional methods of assessing labor percentage often leave operators grappling with hindsight; they may only recognize that they've exceeded their targets after the fact, leading to rushed decisions that can compromise both staff morale and guest satisfaction. These conventional metrics provide just a fleeting glimpse of performance, neglecting to uncover the underlying causes that drive labor costs.

What sets Forge & Flow apart is its commitment to empowering restaurant operators with real-time insights that encourage a proactive approach to management. By providing comprehensive visibility into not just labor percentages, but also the myriad factors influencing them, operators can engage in more strategic planning and resource allocation. This data-driven framework allows them to meet labor needs while enhancing service quality.

One of the standout features of Forge & Flow is its commitment to staff development through accessible training material. The platform enables operators to provide on-the-fly access to training resources, ensuring that staff can find the information they need when they need it. This streamlines the training process and creates a culture of continuous learning and improvement. By equipping employees with the knowledge and skills to excel, restaurants can elevate their service quality and create memorable guest experiences.

In an industry where every decision can significantly impact both the bottom line and guest satisfaction, Forge & Flow stands as a beacon of innovation. By harnessing the power of data and technology, restaurant operators can move beyond reactive strategies. This transformation leads to improved operational efficiency and a dining environment where guest experiences flourish alongside robust financial performance.

How It Started

Forge & Flow was born out of a pressing challenge faced by our restaurant management team. As we oversaw multiple locations, a common struggle emerged: how could managers effectively be on the floor making critical decisions while simultaneously gathering and analyzing the data required to inform those decisions? The reality was that many were left to rely on gut feelings and educated guesses, leading to inconsistencies in decision-making processes.

One of the more daunting challenges was maintaining labor percentages in alignment with the owners' expectations. Managers frequently found themselves caught in a cycle of burnout, trying to meet unrealistic targets without compromising the quality of the guest experience. The ongoing turnover in restaurant staff became an all-too-familiar pattern, with employees leaving due to feelings of being overworked and underappreciated. As managers devoted themselves to keeping everyone happy, they often neglected their own well-being, leaving them overwhelmed and trapped in a system that felt increasingly unsustainable.

In response to these challenges, we resorted to creating spreadsheets that pulled data from various sources, including payroll, POS, and reservation systems, to calculate the data needed for deeper insight. While these numbers provided some insight into performance and helped identify trends, they often came too late to enact meaningful change and the manual input of data was time-consuming. Recognizing the urgent need for a more efficient solution, we developed a real-time dashboard that empowers managers to access critical information at their fingertips. With this tool, they can easily monitor guest spending, anticipate cover counts, and evaluate team productivity - all in real time. By streamlining access to essential data, Forge & Flow transforms the way our managers operate, enabling them to make informed decisions without sacrificing their presence on the floor or the well-being of their staff.

Our Mission

“Creating innovative solutions that empower restaurant operators to spend more time on the floor and less time in the office.”

At the heart of our mission is a commitment to revolutionize the restaurant industry by providing innovative solutions that allow restaurant operators to reclaim their time on the floor, where they truly excel. Most individuals enter the world of hospitality not to be confined to an office, but to foster relationships, building rapport with guests, and lead their teams in a thriving environment. Unfortunately, as restaurant managers climb the ranks, they often find themselves inundated with paperwork and admin duties, sacrificing the very interactions that invigorate their passion for the industry. We believe that the art of building connections and enhancing dining experiences is where their true talents shine. That's why we are dedicated to developing practical, effective solutions that streamline administrative responsibilities, empowering restaurant operators to focus on what they do best - creating unforgettable experiences for their guests and leading their teams with passion and purpose.

Our Core Values

Passion

Infectious passion building resilience and dedication.

Ownership

Step up and take charge. Anticipate challenges and craft creative solutions.

Knowledge

Continuous learning and growth where curiosity flourishes and collaboration comes naturally.

Innovation

Ongoing improvement and adaptability, sparking creativity and a rich mix of ideas.

FORGE & FLOW

Transparency

Open communication to create a culture of authenticity and integrity.

Tab Overview

SHIFT

Under the Shift tab, managers can access a comprehensive overview of live data for the day, enabling informed decision-making at a glance. This feature allows them to monitor crucial metrics such as the number of covers that have come in versus those still expected, current daily sales alongside forecasted figures, and the per person average (PPA) compared to the targeted PPA. Additionally, managers can evaluate Covers Per Labour Hour (CPLH) and Sales Per Labour Hour (SPLH) against their respective targets, while also reviewing the blended wage that reflects the average hourly rate of the staff on duty. With this instant snapshot of performance data, managers gain valuable insights into the business's standing and can proactively address any discrepancies, ensuring they operate with real numbers rather than relying on instinct alone. Adopting a data-driven approach enhances the alignment of daily operations with forecasts, while simultaneously refining efforts to meet key performance indicators effectively.

VARIANCE

The variance tab serves as a vital tool for management by providing a clear comparison between theoretical or baseline expectations and actual performance across key performance indicators (KPIs). This comparison highlights the variance, which represents the gap between what should have happened and what actually occurred. By delving into these variances, management can uncover opportunities for improvement, as each discrepancy signals a potential area for corrective action. Understanding this gap is crucial, as it not only indicates where things may have gone awry but also invites teams to explore the underlying factors contributing to the performance shift.

To effectively address these variances, managers can examine specific metrics such as Covers, Per Person Average, and the number of hours utilized in both the front of house and back of house operations, along with the blended wage. Each of these elements offers insights into the operational nuances that may be impacting overall performance. It's important to recognize that each cause of variance may require a different solution; mistakenly treating them all as mere labor issues can lead to misguided decisions and the cutting of essential resources. By taking a detailed, analytical approach to evaluating these variances, management can implement targeted strategies that truly address the root causes and ultimately enhance overall efficiency and performance.

The variance tab not only provides a comprehensive overview of your current metrics but also features a history tab for tracking past data and a learn tab that offers valuable feedback on persistent leaks and repeatable wins, empowering users to make informed decisions for improvement.

PLAN

Under the "Plan" tab, users can access their comprehensive weekly plan, which provides a detailed forecast for each day of the week. These forecasts are meticulously crafted by analyzing 60 days of data from the Point of Sale (POS) system, while also considering various factors that may impact guest covers, such as existing reservations. The forecasting tool goes beyond traditional methods by not only assessing historical data but also by taking into account current trends and expected guest attendance. By calculating the Per Person Average (PPA) from the past two months and pairing it with anticipated guest numbers, the system generates accurate sales forecasts. Additionally, the start day of the week is customizable, allowing clients to tailor their planning based on what best fits their operational rhythms and preferences.

At the bottom of the weekly plan, users can view the cumulative total for the week, including real-time performance against forecasts. This feature offers insights into how the current week is progressing compared to projections and indicates what sales figures could look like if the current trajectory continues. Furthermore, users can navigate to a dedicated tab showcasing historical data from previous weeks, enabling them to identify patterns and make informed adjustments to their strategies as necessary.

BENCHMARK

Under your benchmark tab, you will find a clear benchmark for each Key Performance Indicator (KPI), providing you with a reliable baseline of data to guide your operational decisions. This baseline is established by pulling in 60 days' worth of data from your Point of Sale (POS) system, ensuring that your performance metrics are grounded in recent, relevant trends. Every 60 days, your targets will shift, allowing for adjustments that take into account various factors such as optimization efforts, seasonal fluctuations, and even changes in weather conditions. This structured approach enables you to maintain a consistent set of KPIs over a two-month period, minimizing the potential for confusion or volatility that can arise from constantly shifting targets.

Additionally, managers have the flexibility to override these targets once, should unique circumstances arise that could distort normal performance metrics, such as a sudden change in market conditions or unforeseen operational challenges. This singular adjustment allows for necessary flexibility while maintaining the integrity of the data. By restricting the number of alterations, the system fosters a more realistic representation of results, minimizing the potential for skewed data that could lead to misguided decisions. This balance of adaptability and consistency ensures that your team can respond effectively to emerging challenges while remaining grounded in reliable, actionable insights.

Learning Management

Learning Management Systems (LMS) have revolutionized the way operators train their staff, providing a structured and efficient alternative to traditional training methods. With features that allow for the creation of customized training materials, testing and scoring capabilities, and the automatic assignment of learning modules, LMS platforms not only streamline the training process but also allow operators to track staff progress in real-time. This enhanced visibility into employee development is crucial for ensuring that team members acquire the essential skills and knowledge necessary for success. However, the financial commitment required for these systems can be a significant hurdle, with costs ranging from \$400 to \$3,000 per month for a restaurant employing around 50 staff. Given the multitude of technology solutions that operators must integrate to maintain competitiveness, investing in comprehensive training often falls by the wayside.

The consequences of inadequate training can be detrimental, with many establishments rely on the informal transfer of knowledge from one employee to another, which may not always be comprehensive or accurate. This reliance can result in poorly trained employees who lack the essential information and skills required for their roles, ultimately impacting the overall performance of the restaurant. Acknowledging this challenge, we have integrated an LMS into our app, providing staff with easy access to training materials, handbooks, and assessments. As employees engage with this content, they receive scores reflecting their understanding and retention of the material relevant to their position. Managers can effortlessly track the progress of each team member within the same app they use to monitor key performance indicators (KPIs), ensuring that training and operational efficiency go hand-in-hand.

Standard Operating Procedures (SOPs) are essential for ensuring that tasks within a restaurant are completed accurately and consistently, establishing a reliable standard for all operating practices. Our app conveniently stores these SOPs, making them easily accessible to all staff members, who can use them as a quick reference tool for their duties. Instead of sifting through cumbersome binders, manuals, or relying on guesswork, staff now have all necessary SOPs at their fingertips, significantly reducing uncertainty around procedures. This accessibility empowers staff to execute their tasks with confidence and enables restaurants to standardize their operations.

Chat Bots And Agents

Our app features a user-friendly chat bubble that floats seamlessly on the home screen of each location, providing staff with an intuitive way to tap into the restaurant's training content and operational data. Employees can easily ask questions, such as "Why is my PPA so low?" and receive tailored answers derived from the restaurant's specific training content and operational data. By leveraging the wealth of information that exists within the restaurant's ecosystem, the app empowers staff to make informed decisions and improve performance, creating a more knowledgeable and efficient workplace. For managers, the app expands its functionality with a specialized version that comes equipped with advanced permissions designed to assist in complex tasks such as automating P&L summaries, clarifying variances, and drafting employment-related letters.

Unlike standard AI systems that isolate data into disconnected fragments, our app creates a connected web of relationships. This structure links shifts to managers, managers to locations, locations to labor, labour to baselines, and baselines to methodologies and training materials. As a result, the app learns and evolves like a human being, synthesizing information to provide nuanced, informed answers rather than simple keyword matches. This holistic approach not only enhances the app's intelligence but also enriches the user experience, making valuable insights readily accessible and relevant to each user's specific context.

Team Communication

The team board serves as a dynamic digital communication platform designed to keep all staff informed, engaged, and connected. Here are the different sections:

DAILY BOARD

Daily need-to-knows from the manager include critical updates on what's 86'd, tonight's specials, VIP arrivals, and essential service notes, all easily accessible for staff to review; the platform not only displays the last three days of information for quick scrolling but also offers insights into the expected busyness based on forecasted covers and confirmed reservations through our Open Table integration.

ANNOUNCEMENTS

Longer posts from the manager detailing policy changes, menu rollouts, and upcoming events, which will remain accessible for two weeks, allowing everyone to stay informed; additionally, both employees and managers can track who has read the announcements - similar to an Instagram or Messenger message read receipt - and the ability for managers to pin important updates to ensure that critical information is always visible to everyone during their shift.

FOCUS

Highlights a key initiative that the entire team will concentrate on this week, allowing managers to select this priority based on last week's variance and our comprehensive training material, while also providing the flexibility to input their own ideas.

RECOGNITION

Where managers can acknowledge their staff's hard work by awarding badges, which can be easily viewed under the training podium, fostering a culture of appreciation and motivation within the team.

COACHING

This exclusive tab for managers provides a detailed comparison of variance for each staff member during 1:1 meetings, allowing you to identify those who may require additional support this week; furthermore, it assists you in selecting coaching moments from our training material while also giving you the flexibility to add your own personalized insights.

The Proactive Metrics

Our app generates a suite of proactive metrics that provide unique insights into restaurant operations. Each metric presents a distinct perspective, providing a deeper overview of the operational landscape. By seamlessly integrating with existing technology solutions, our app calculates these critical numbers, offering a comprehensive analysis that no other technology currently provides. With these insights at your fingertips, restaurants can navigate challenges with confidence and optimize their potential like never before.

Covers Per Labor Hour (CPLH): quantifies the number of guests served by staff for each hour worked, enabling managers to optimize staffing levels, minimize waste, and enhance profitability by emphasizing actual output rather than labor cost percentages. This metric provides a more accurate measure of operational efficiency, as it reflects variations in guest flow and assists in identifying whether staffing is adequate during peak and slow periods.

Sales Per Labor Hour (SPLH): measures the revenue generated by your staff for each hour worked, calculated by dividing total sales by total labor hours. This metric helps managers identify potential overstaffing or understaffing situations and is a tool for optimizing staffing levels and controlling costs, ultimately guiding more informed scheduling decisions to enhance profitability.

Per Person Average (PPA): also known as AGC - Average Guest Check - metric for restaurant managers, allowing them to identify sales trends across various shifts and periods, and highlighting opportunities for improvement such as menu engineering, promotional combo offers, and staff training that can drive profitability by enhancing server performance and ultimately boosting overall revenue without incurring additional guest acquisition costs.

Covers: the number of guests dining in a day and serves as a crucial metric for assessing business volume, seating capacity, and operational efficiency, effectively highlighting how each patron contributes to the overall dining experience.

Blended Wage: reflects the average cost per hour of staff, enabling organizations to assess whether any increases in labor costs are due to overtime, characterized by a higher wage, or a greater presence of higher-paid, skilled staff during specific shifts.

Table Turn Time: Measures the average duration a party occupies a table, from seating to departure, as well as the necessary time for cleaning and resetting the table for the next guests. A faster turn time can significantly enhance a restaurant's ability to increase the number of covers served, thereby boosting overall profitability.

The Importance Of Day Parts

Breaking down restaurant statistics into distinct day parts - lunch, dinner, and late night - provides valuable insights into guest behavior and spending patterns. During lunch, guests typically operate under tighter time constraints, resulting in quicker table turn times and a lower AGC (average guest check). Guests often forgo appetizers and desserts, and alcoholic beverages are less common during this mid-day meal. Consequently, while the average guest check during lunch tends to be lower, the ability to seat more guests within a particular timeframe can offset this, offering a strategic advantage for restaurant operators looking to maximize their operational efficiency during midday service.

Dinner guests tend to indulge in multiple courses and luxury alcohol, contributing to a higher average check despite longer table turn times. Here, the focus is on a more leisurely dining experience, encouraging patrons to savor their meals and engage in conversation. The late-night crowd tends to indulge in a different dining experience, often opting for shared snacks and a greater emphasis on alcohol consumption. By analyzing these day parts individually, restaurant operators can better align their menus, staffing, and marketing strategies with the specific behaviors and expectations of their guests. This targeted approach not only enhances the dining experience but also ensures that revenue numbers remain aligned with guest behavior, ultimately driving better business outcomes.

Forge&Flow: Self Calibrating Architecture

The Forge & Flow Knowledge Graph

Our Leadership

SAID KHAN - OWNER/SOFTWARE ARCHITECT

Said Khan offers a distinctive blend of operational insight and technical prowess, honed over years of hands-on experience in both kitchen management and technology leadership. A recent graduate of the Computer Science program at the Memorial University of Newfoundland, Said has spent his career bridging the gap between the fast-paced world of hospitality and the precision of modern technology.

During his tenure as the Technology Officer at Jungle Jim's Eatery, Said was instrumental in revolutionizing how the brand integrates cutting-edge technology into daily restaurant operations. He took full ownership of the programming and technical support for the company's POS systems, meticulously crafting a comprehensive operational tech stack. His leadership was a driving force behind the swift implementation of a fully customized POS system, designed specifically to align with the unique workflows of a high-volume restaurant. By standardizing network infrastructure and takeout menus across all corporate locations, he ensured a consistent brand experience while significantly smoothing out backend operations.

Said's technical contributions are deeply rooted in efficiency and scalability. He successfully integrated advanced scheduling tools into the company's daily practices, a move that streamlined time management and payroll processes. This initiative highlighted his unique ability to identify systemic inefficiencies and develop digital solutions that elevate both team performance and the bottom line.

However, Said's influence extends far beyond the server room. His background as a Kitchen Manager provided him with a "boots-on-the-ground" perspective that most developers lack. In the kitchen, he focused on fostering team cohesion and building a positive work culture. By emphasizing morale, clarity, and pride, Said transformed his kitchen into a high-performing unit where excellence became the daily standard. This experience taught him that the best technology is only as good as the people using it.

With a deep academic foundation in Computer Science and a genuine passion for the hospitality industry, Said creates technology with restaurants at the forefront of his mind. He is committed to developing scalable systems that not only solve operational headaches but also significantly elevate the guest experience. Said continues to be a leader who understands that the heart of a restaurant is its people, and the right technology is the pulse that keeps it running smoothly.

VANESSA GALLEGOS VENEGAS - OWNER/BUSINESS DEVELOPMENT

Vanessa Gallegos is a seasoned food and beverage executive who has spent over 15 years redefining excellence in high-volume, multi-concept environments. As a leader known for her strategic vision and unwavering commitment to company culture, Vanessa has built a career centered on driving operational brilliance, sustainable revenue growth, and record-setting performance. Her approach blends a sharp business mind with a genuine passion for the people who make the hospitality industry thrive.

Vanessa spent years in Toronto, collaborating with celebrity chefs and industry pioneers. This period was transformative, allowing her to sharpen her skills in some of the country's most competitive markets. From managing intimate neighborhood pubs to overseeing large-scale, multi-concept establishments, Vanessa developed a unique perspective: the ability to balance aggressive high-volume sales targets with the authentic, warm hospitality ethos she carried with her from the East Coast.

Currently serving as the Director of Operations for Jungle Jim's Eatery, Vanessa has been the driving force behind a series of transformative initiatives. She is credited with enhancing operational efficiency by completely redesigning employee workflows and implementing a culture of comprehensive, hands-on training. Her strategic shifts have led to a measurable increase in overall sales and successfully reduced the brand's reliance on discounting strategies, proving that a superior guest experience and operational discipline are the truest drivers of profitability.

Beyond the dining room, Vanessa is a champion of innovation and professional development. She has established new performance benchmarks and standard operating procedures that have become the backbone of her teams' success. By focusing on coaching and leadership development, she has strengthened team engagement and created a pipeline of talent within the organization. Her ability to streamline cross-departmental processes ensures a seamless guest experience.

Vanessa's influence also extends into the realm of hospitality technology. During her tenure with Jungle Jim's, she championed the company's digital transformation, acting as the primary lead for technology solutions. From handling contract negotiations and software demos to managing location-specific training and rollout schedules, Vanessa ensured that the brand remained at the cutting edge of industry tech.

BHANUPRIYA - TECHNICAL SALES REPRESENTATIVE

Originally hailing from India, Priya's journey in Canada began with a drive for higher education and a future full of possibility. While she initially set her sights on a degree in Computer Science, it didn't take long for her to realize that her true calling lay elsewhere. Recognizing a deep-seated passion for sales, hospitality, and human connection, she made the bold decision to pivot her studies toward Business - a move that perfectly aligned her academic pursuits with her natural talents for engaging with people and driving growth.

With over five years of dedicated experience in the hospitality industry, Priya has become a cornerstone of the teams across various Jungle Jim's venues. Her career is a testament to the power of hard work and a "yes" mentality. Without formal training, she dove headfirst into the industry, working her way through nearly every role imaginable. From the fast-paced energy of bartending and serving to the technical demands of food running and kitchen prep, Priya has seen it all. This hands-on, "in the trenches" experience has equipped her with a comprehensive, 360-degree understanding of both front-of-house and back-of-house operations. Today, she leverages that knowledge as a capable leader and trainer, guiding her colleagues with the insight that only comes from having walked in their shoes.

Priya's greatest strength is her innate ability to connect and align with people. She doesn't just provide a service; she builds relationships. Whether she is striking up a conversation with a regular or influencing new guests to support the business, she goes out of her way to make every interaction meaningful. Her professional philosophy is simple yet profound: every guest deserves unwavering respect and care. She is a firm believer that no guest should ever feel like an "inconvenience," even during the most hectic, high-pressure service periods. Her dedication to fostering positive guest experiences is what makes her an invaluable asset to any team she joins.

Looking toward the future, Priya is uniquely positioned to bridge the gap between traditional hospitality and modern technology. Having spent years on the floor, she possesses a deep respect for the time of operators and managers. She understands that every minute spent troubleshooting a system is a minute lost that could have been spent building connections with guests and supporting staff. This "floor-first" perspective allows her to sell tech solutions not just as tools, but as essential ways to give time back to restaurant leaders.

Our Competitive Edge

In the dynamic world of restaurants, the intersection of technology and operations has never been more crucial. As we navigate through an era marked by rapid change and evolving consumer demands, the alliance between Restaurant Operations Professionals and Systems and Integration Architects is redefining what it means to successfully run a restaurant. Operators bring invaluable insights into what their establishments require to succeed, yet they often grapple with articulating these operational needs in technical terms. Conversely, software engineers and architects possess the skills necessary to develop tailored solutions, but they may lack a deep understanding of the unique dynamics of the restaurant environment. By bridging this gap, we can create innovative tech solutions that operators will actually use, transforming challenges into opportunities rather than overwhelming them with yet another piece of technology to manage.

In a world where many restaurants are struggling to survive, we focus on what truly drives operational efficiency. Rather than merely relying on historical sales data or broad labor costs, we delve into analyzing key performance indicators such as covers per labor hour, sales per labor hour, and table turn times, segmented by specific day parts. This in-depth analysis equips restaurants with invaluable insights into production levels and guest behavior, critical factors for thriving in a competitive landscape. With two decades of management experience in the restaurant industry, we understand precisely what operators seek from their tech solutions.

Our experience in rolling out POS systems and technology solutions across various restaurant locations has made us acutely aware of the common pitfalls that many tech solutions encounter. We've seen firsthand how a rapid deployment of new features can lead to unforeseen complications, often leaving teams in a scramble to diagnose and rectify issues. This realization has shaped our philosophy toward system development. We advocate for a "build from the ground up" mindset, intentionally avoiding the clutter of unnecessary additions that can lead to instability and errors in applications.

We understand that communication is key in this partnership. Often, those with technical expertise, such as software engineers and architects, encounter difficulties in conveying their knowledge in a relatable manner. Meanwhile, sales team members may be enthusiastic about the product yet lack the technical depth to fully explain its functionalities. By aligning the expertise of both technical and operational professionals, we create an environment where ideas flourish, leading to innovations that resonate with restaurant operators.

ONBOARDING

Includes Integrations, Customization, Training, and Implementation
Onboarding cost determined by the amount of features, the number of solutions required for integration, and the difficulty of those integrations.
\$250-\$1000

BASIC PACKAGE

KPI Dashboard, Back Office Reporting, Customized App With Up To Four Logins, Chatbot for Management, Automated Feedback For Managers
\$250/Month

PREMIUM PACKAGE

KPI Dashboard, Back Office Reporting, Customized App, Chatbot for Management, Automated Feedback For Managers, LMS Platform, Employee Scoreboard and Performance Tracking
*\$250/Month +
\$5 Per User/Month For First 20 Users, \$3 Each Additional User*

ELITE PACKAGE

KPI Dashboard, Back Office Reporting, Customized App, Chatbot for Management and for Staff, Automated Feedback For Managers and for Staff, LMS Platform, SOP Templates, Training Manual Library, Employee Scoreboard and Performance Tracking
*\$250/Month +
\$7 Per User/Month For First 20 Users, \$3 Each Additional User*

SWOT ANALYSIS

STRENGTHS	WEAKNESS
• Team with extensive tech and restaurant experience • Innovative solution • Widespread connections with restaurants and tech solutions • Agility and speed • Direct restaurant testing • Superior user experience	• Lack of brand awareness • New to entrepreneurship • Dependency on key staff • Higher customer acquisition costs • Incomplete feature set • Lack of IT support strategy
OPPORTUNITIES	THREATS
• Strategic partnerships • Demand for operational efficiency • Emerging market trends • Niche market targeting • Increased demand for data analytics • Scalability	• Platform dependency • Restaurant economic vulnerability • Consumer adoption resistance • Regulatory changes • Cybersecurity attacks • Platform fragmentation

Strengths

TEAM WITH EXTENSIVE TECH AND RESTAURANT EXPERIENCE

We are a dynamic team that seamlessly blends extensive experience in both the tech and restaurant industries, boasting over two decades of high-level restaurant management expertise. Our ownership team successfully built the tech stack for a franchise restaurant company and took the lead on managing franchise tech integrations, guiding the decision-making process with confidence and clarity while holding the Technology Officer and Director of Operations titles. Throughout our journey, we have identified a common challenge faced by many organizations: a communication gap between technical experts and restaurant operators. Often, software engineers and architects find it difficult to present their knowledge in an accessible manner, while sales teams, though passionate about the product, sometimes lack the technical depth needed to fully elucidate its functionalities. By bridging this gap where both technical and operational insights align, we are able to drive innovation and success in the restaurant industry.

INNOVATIVE SOLUTION

Too often, technological solutions for restaurants are developed by individuals who lack firsthand experience in the industry, leading to products that address superficial trends rather than the root problems that restaurants face. This oversight can result in an influx of tech that overwhelms operators without delivering the meaningful optimization they need. With over two decades of experience in restaurant operations, we possess a profound understanding of these underlying issues and the effective strategies required to tackle them. Our innovative solution empowers restaurant owners with real-time data that provides clarity and insight into their operations. By correlating data to the fundamental aspects of the restaurant, we reveal the reasons behind fluctuating numbers, enabling swift and informed decision-making. Unlike other systems that merely report sales and labor percentages, our approach goes deeper, offering actionable insights that help restaurants thrive in a competitive landscape.

WIDESPREAD CONNECTION WITH RESTAURANTS AND TECH SOLUTIONS

With years of experience in the restaurant industry and active participation in conferences across Canada and the United States, we have cultivated a robust network of contacts. Throughout our journey of building the tech stack for our franchise, we've had the privilege of connecting with a diverse array of tech solutions, spanning POS systems, payment processing, reservation tools, payroll and scheduling software, and customer relationship platforms. These invaluable connections not only empower us to effectively engage with new clients but also facilitate seamless integration with leading tech solutions, enabling us to secure API access and drive innovation within the industry.

AGILITY AND SPEED

As a small team, we thrive on our ability to pivot, iterate, and launch updates at an impressive pace, setting us apart from larger competitors. Our close-knit structure allows for direct and rapid communication, enabling us to prioritize speed, flexibility, and responsiveness. With fewer approval layers in place, we can react quickly to market changes and customer feedback, fostering an environment of continuous improvement and aligned vision. Each team member plays a vital role, resulting in heightened motivation and a shared commitment to fast problem-solving. This agile approach empowers us to take calculated risks and learn from small setbacks, all while larger corporations often find themselves encumbered by complex hierarchies that can stifle innovation.

DIRECT RESTAURANT TESTING

Utilizing our app directly within our restaurant operations enables us to witness its effectiveness firsthand, allowing us to continuously improve. By gathering insightful feedback from our trusted team, we can swiftly adapt the app to ensure it delivers the critical information we all need to operate at peak performance. This hands-on experience allows us to clearly see how the app optimizes our processes, eliminating any obstacles to productivity. We can also tailor the presentation of information to match our team's unique needs, ensuring they can access data with the speed and clarity that enhances their performance in a dynamic restaurant setting.

SUPERIOR USER EXPERIENCE

With a deep understanding of how operators work, our app is crafted specifically from a restaurant operator's perspective, ensuring ease of use for all team members. Features designed by techies rather than operators are often too complex, leading to low usage and high frustration. Our intuitive design allows users to quickly find the information they need, enabling them to adapt swiftly to changing circumstances. The app offers quick access to essential training materials and standard operating procedures (SOPs), ensuring that every staff member has the information necessary to complete tasks accurately. With the ability to rapidly update training materials and disseminate them to the entire team, the app eliminates the need for traditional printing, promoting efficiency and consistency. Not only does the app provide valuable feedback on operations, but it also generates data-driven solutions based on collected insights, alleviating the burden on managers to analyze and troubleshoot on their own. Additionally, the option for customized branding allows restaurants to incorporate their own logos, colors, and photos, personalizing the experience and reinforcing their identity - all while having the app named after their establishment for effortless recognition.

Weaknesses

LACK OF BRAND AWARENESS

As a new tech company, we recognize the crucial challenge of establishing brand awareness in a crowded market, where visibility is key to gaining traction and connecting with potential clients. Our current lack of online presence significantly hinders our ability to engage users, as first impressions are often formed within seconds through a website or social media profile. Without a strong branding strategy, our innovative app risks blending into the background, making it difficult for users to break away from familiar competitors. To overcome this, we must prioritize cultivating a robust online identity that resonates with our target audience, emphasizing the value we provide through meaningful content rather than relying solely on ads. By building authority and trust, we can transform this initial deficiency into a valuable opportunity for growth.

NEW TO ENTREPRENEURSHIP

As new entrepreneurs, it's easy to see our inexperience as a high-risk factor, and the practical challenges we face while running a business for the first time can indeed lead to common pitfalls. Issues like cash flow mismanagement, lack of focus, and poor delegation can derail even the most promising ventures. The immense pressure to succeed often translates into long hours and an unhealthy work-life balance, which can culminate in burnout. However, these weaknesses are not permanent; they can be addressed and transformed. By cultivating a strong, experienced team, investing in our own skill development, and consciously tackling these pitfalls rather than avoiding them, we can pave the way for sustainable growth and success in our entrepreneurial journeys.

INCOMPLETE FEATURE SET

While we are currently able to integrate with multiple POS systems, the landscape is diverse, with many older models still in operation. These older, closed-loop, on-premise systems often lack the necessary cloud connectivity to interface with modern applications, ultimately functioning in isolation and making it challenging to incorporate third-party tools. Additionally, they frequently fall short of regular security updates and may not adhere to current PCI DSS compliance standards, rendering them vulnerable to data breaches and fraud. This creates a limitation in our ability to collaborate with restaurants that have not yet upgraded their POS systems. Although our app may not encompass every feature available, we pride ourselves on our focused approach, delivering exceptional data integration with top solutions. While many tech companies offer all-in-one solutions, they often spread their resources too thin, resulting in subpar development for each feature. Instead, we emphasize delivering tangible results, implementing features in stages rather than overwhelming our clients with a "big bang" approach.

DEPENDENCY ON KEY STAFF

As a startup, we recognize the immense value of key team members in driving our vision forward. However, we also understand that when vital knowledge - such as proprietary code and system architecture - resides solely with one individual, it introduces significant risks, including potential development delays and business disruptions if that person becomes unavailable. This reliance can limit our capacity for growth and innovation, potentially leading to burnout. To mitigate these challenges, we are proactively documenting our processes, system architecture, and codebases to secure essential intellectual property. We are also committed to building a diverse team with overlapping skills, ensuring that knowledge is shared and everyone can contribute to our mission.

HIGHER CUSTOMER ACQUISITION COSTS

High customer acquisition costs (CAC) for restaurant technology are often a result of long sales cycles, skepticism about ROI, and fierce competition for limited budgets. Given their typically thin profit margins, restaurant operators are understandably cautious about adopting new tools, fearing potential disruptions to established workflows, technical glitches during peak hours, and the steep learning curves associated with new technology. This hesitation necessitates a trust-building process that goes beyond simple digital marketing, often requiring a consultative, in-person approach that can drive up personnel costs. Many operators struggle to visualize how a new technology might enhance profitability or enrich the guest experience, which is reflected in their tendency to allocate a minimal percentage of annual revenue to technological investments. As a tech company with deep roots in the restaurant industry, we truly understand the operators' perspective and the importance of their bottom line. Having experienced numerous pitches ourselves, we know the most effective ways to engage with restaurant owners - after all, we want to be approached in ways that resonate with us. Our focus on one-on-one, in-person interactions allows us to foster genuine connections with clients, and by utilizing our own technology within our restaurant, we can directly demonstrate to owners how our app enhances both profitability and operational efficiency.

LACK OF IT SUPPORT STRATEGY

As we continue to develop our app, we recognize that formulating a robust IT support strategy for our future clients has not yet been a priority. However, we understand the potential pitfalls of lacking in-house IT expertise, such as slow bug fixes, unmanaged software updates, and extended downtime, which can detract from our focus on scaling the business. Without dedicated IT support, founders often find themselves grappling with technical debt and urgent repairs, creating a stressful work environment that can hinder growth. To proactively address this challenge, we are committed to establishing a solid IT support structure with an in-house team, ensuring that we bring on the right talent with the necessary skill sets. This thoughtful approach will empower us to guide our clients effectively from day one, providing clear actions and contact points to streamline their experience and enhance overall satisfaction.

Opportunities

STRATEGIC PARTNERSHIPS

Leveraging the relationships we've already cultivated presents an exciting opportunity to forge strategic partnerships with other tech companies and restaurant consultants, which can significantly accelerate our growth and enhance our credibility. By collaborating with established firms, we gain invaluable market exposure and access to new resources that can help us expand our reach. Our ongoing partnership with Jim Taylor, owner of Benchmark Sixty and host of Restaurant Canada's podcast, has been instrumental. His expertise in revolutionizing how restaurant operators interpret data aligns perfectly with the automation capabilities of our app. Since June 2025, we've nurtured a strong relationship with Jim, whose clients would be prime candidates for our solution. Additionally, establishing connections with POS companies can boost our visibility and provide strong advocates for our brand. By integrating with complementary tech solutions, we can create comprehensive offerings that optimize operations for our clients, ultimately driving mutual benefits.

DEMAND FOR OPERATIONAL EFFICIENCY

As restaurant demand for operational efficiency continues to rise, driven by razor-thin margins, labor shortages, and high competition, leveraging technology has become essential for success. By utilizing data-driven solutions, restaurants can streamline operations, allowing staff to focus on delivering exceptional customer service instead of getting bogged down by manual, repetitive tasks. By leveraging data through an innovative app, operators can access essential information without the hassle of manual entry or calculations, significantly reducing time spent in the office and more time on the floor, filling crucial gaps and training staff to improve overall efficiency. Additionally, having immediate access to training materials and standard operating procedures (SOPs) through the app means employees can quickly reference essential documents without sifting through messages or binders, allowing staff to complete tasks more efficiently while following company standards. The introduction of an employee scoreboard further enhances motivation by facilitating sales contests and calculated incentives, all while eliminating the need for cumbersome reporting processes.

EMERGING MARKET TRENDS

Current market trends in tech solutions for restaurants are increasingly focused on harnessing the power of artificial intelligence to enhance operational efficiency and guest experience. Demand forecasting has emerged as a crucial tool for restaurants, leveraging AI to accurately predict guest needs and optimize staffing, thereby reducing operational costs. The rise of unified, all-in-one platforms promises simplicity but often comes with drawbacks, as they can be complex to manage and lack the specialized performance of dedicated solutions. Our app addresses these challenges by creating data-driven forecasts and benchmarks based on 60 days of POS data and reservation activity, allowing managers to make informed decisions on scheduling and operations in real time. The integration of CRM (Customer Reputation Management) scores alongside operational data allows for quick trend analysis, linking customer spending patterns and productivity to guest satisfaction in a coherent manner. Unlike other all-in-one solutions that can compromise quality for convenience, our app offers seamless integration with the best technologies tailored to individual needs, presenting data in a streamlined format that enhances operational efficiency for restaurant owners.

INCREASED DEMAND FOR DATA ANALYTICS

The restaurant industry is currently experiencing a remarkable surge in demand for data analytics, fueled by the pressing need for enhanced profitability and labor efficiency. Operators are transitioning from reliance on intuition to implementing data-driven strategies, streamlining decision-making and alleviating stress for managers and staff. This shift allows managers to focus more on guest interactions rather than problem-solving in the absence of data. By analyzing sales patterns, restaurants can effectively optimize staffing, minimizing overstaffing during slower periods and boosting overall operational efficiency. In fact, data-driven operators are achieving remarkable success, often outperforming traditional counterparts by double-digit margins. Our innovative app takes this a step further by automatically generating forecasts and benchmarks while offering actionable insights for improvement, effectively removing the guesswork from day-to-day operations and paving the way for a more successful and enjoyable dining experience.

NICHE MARKET TARGETING

Restaurants represent a unique niche market for technology solutions due to their distinct operational challenges, such as high labor and food costs, thin profit margins, and the necessity for rapid, multi-channel service. To navigate these complexities, restaurants require tailored tools that align with their specific workflows and real-time operational needs. Our extensive experience in the restaurant industry - having directly operated establishments and faced similar challenges as our potential clients - positions us as the ideal partner for marketing to this niche market. We understand the flexibility required to accommodate varying layouts and reporting preferences, recognizing that automated scheduling solutions often miss the critical human element of team dynamics. High staff turnover stems not just from operational stress but from a lack of supportive leadership; culture is fostered by leaders who are present and engaged with their teams. Our app is designed to empower managers to be actively involved on the floor, reinforcing a supportive environment and enhancing staff morale, a concept that remains largely unrecognized by other tech providers. By prioritizing the value of human connection in the restaurant industry, we offer a fresh perspective that resonates deeply with restaurant operators, allowing us to connect and thrive in this niche market.

SCALABILITY

Our app presents a remarkable opportunity for rapid scaling, leveraging its digital nature to expand swiftly into new regions. By adopting a "build from the ground up" philosophy, we intentionally bypass unnecessary complexities that can lead to instability, ensuring a robust application. Our meticulous attention to detail allows us to track every user interaction, providing invaluable insights into our technology's functionalities and enabling us to swiftly diagnose and resolve any issues. Through agile development, we embrace high-speed product iteration, allowing us to adapt quickly to user feedback and improve our offerings continuously. By focusing on the restaurant industry's niche, we can effectively productize commonly built components into reusable assets, enhancing our efficiency. Coupled with our subscription-based model, which generates ongoing revenue with minimal labor costs post-setup, and our small, cross-functional teams that can pivot rapidly, we are well-positioned to seize growth opportunities and drive our vision forward.

Threats

PLATFORM DEPENDENCY

In today's rapidly evolving tech landscape, platform dependency poses a significant risk to applications through potential single points of failure, particularly when relying on major third-party providers like AWS, Apple, or Google. This reliance can lead to catastrophic consequences, including unexpected downtime, abrupt policy shifts, or algorithm changes that can wipe out visibility and revenue in an instant. To mitigate these risks, we are proactively diversifying our infrastructure by avoiding exclusive reliance on a single cloud provider or API. By adopting cross-platform development frameworks, we minimize our dependence on native iOS and Android tools, ensuring our applications remain flexible and adaptable. Furthermore, we design our systems to be easily migratable to new providers by decoupling backend services and continuously monitor the health, security, and updates of external APIs.

RESTAURANT ECONOMIC VULNERABILITY

The economic vulnerability facing the restaurant industry presents a significant challenge for our tech application, as the very establishments we serve are grappling with rising costs and thin margins. With a staggering 62% of restaurants operating at either a loss or break-even last year, many are actively searching for effective ways to tighten their budgets, including potential cuts to IT expenses. This climate not only raises concerns about the possibility of restaurant closures, but also places our client base at risk should they choose to discontinue using our app in the absence of a discernible return on investment. To address these challenges, it's crucial that we communicate the tangible benefits our app offers and users with the proper training, ensuring that restaurants not only understand how to leverage these advantages but also find our platform user-friendly from the outset.

CONSUMER ADOPTION RESISTANCE

Restaurants often find themselves hesitant to embrace new technology due to concerns that it may undermine the personalized, high-touch experience that guests cherish. Many operators face the daunting challenge of integrating disparate systems, which can feel like an overwhelming task requiring a tech-savvy IT department - something that isn't feasible for all establishments. Additionally, the fear of disrupting established operations, coupled with the need for extensive staff training and the risk of system failures during peak hours, compounds their reluctance. However, our app, developed by operators for operators, aims to alleviate these concerns by seamlessly integrating the technologies they wish to adopt into one cohesive solution. With our deep understanding of the unique challenges faced by restaurant operators, we strive to simplify the tech landscape, enabling them to enhance guest experiences without sacrificing the human touch they value.

REGULATORY CHANGES

Legal and regulatory changes surrounding data privacy, such as GDPR and CCPA, pose formidable challenges for tech applications, driving up operational costs, jeopardizing data-driven revenue models, and threatening substantial penalties for non-compliance. These stringent regulations compel developers to rethink user tracking methods, which can hinder advertising efficiency and restrict the data critical for AI-driven personalization. However, by proactively integrating compliance measures into the software development life cycle (SDLC), our app not only addresses these challenges head-on but also turns potential threats into streamlined processes. This forward-thinking approach not only safeguards user privacy but also ensures that our technology remains innovative and effective, ultimately supporting a seamless user experience while adhering to the highest standards of compliance.

CYBERSECURITY ATTACKS

Cybersecurity attacks are increasingly targeting startups and restaurants, often perceived as vulnerable due to their limited resources and security practices. Startups, often brimming with valuable intellectual property and innovative solutions, face risks from attackers looking to exploit weak defenses in pursuit of sensitive data or as gateways to larger partners through supply chain attacks. Meanwhile, restaurants, rich in guest information yet often lacking robust IT investments, present an appealing target for cybercriminals, especially given their reliance on third-party platforms which expands the attack surface, outdated POS systems using weak encryption, and connection to unsecure networks. The potential for reputation-damaging breaches looms large, which is why we have prioritized rigorous third-party security audits to safeguard against these threats. By enhancing our security posture, we protect our assets allowing us to build trust and confidence among our clients.

PLATFORM FRAGMENTATION

Restaurants today often find themselves navigating a maze of disconnected software providers and systems, leading to inefficient workflows that can hinder success. The high fees associated with multiple platforms, paired with operational inefficiencies, can significantly strain profit margins, making it understandable for restaurant owners to hesitate when considering the addition of new solutions to their tech stack. This hesitation can create barriers to seamlessly integrating existing technology, and complicates the integration process. Navigating the myriad of tech solutions available can inadvertently increase our team's workload, as we face the challenge of integrating multiple disparate systems that often lack seamless communication, ultimately complicating our efforts to generate accurate and cohesive data.

Our Competitors And Current Demand

As the restaurant industry continues to evolve, there is a notable shift towards an increased demand for comprehensive all-in-one solutions. By 2026, a significant 37% of restaurant brands identified fragmented systems and data integration as one of their foremost barriers to success. The growing complexity of multi-channel operations, exacerbated by the pandemic, has left many operators grappling with systems that fail to communicate effectively. This disconnection often results in reporting delays, duplicated labor efforts, and a lack of insightful guest understanding. Our innovative app addresses these integration challenges head-on, streamlining operations to eliminate reporting lags and optimize labor rather than duplicating it.

In the quest to enhance convenience for guests, many emerging trends have introduced solutions such as QR code ordering at tables, interactive tabletops, and chatbots for reservations. While these advancements certainly help alleviate some labor shortages, they can inadvertently detract from the essential human interaction that defines a memorable dining experience. The reality is that labor shortages often stem from deeper-rooted issues, such as a lack of positive company culture. Our focus is on empowering management to engage directly with guests instead of being bogged down by administrative tasks. By freeing staff from these duties, we enable them to focus on the guest-facing elements that truly matter. Automated systems may offer convenience, but the absence of personalized interactions leaves guests longing for the guidance that enhances their dining experience - such as in-depth menu explanations and personalized recommendations.

In addition to addressing guest engagement, the restaurant sector faces another pressing challenge: high staff turnover. Onboarding and training new employees can be a daunting task, leading many establishments to grapple with untrained staff and the negative consequences that follow. Learning Management Systems (LMS) are emerging as a valuable solution, allowing for easy updates to training materials, testing, and tracking employee progress. However, the high costs of implementing such systems often lead restaurants to forgo them altogether, perpetuating a cycle of inadequate training and turnover. Our solution offers an LMS at a more approachable rate, complete with standard operating procedure (SOP) templates and stock training manuals, offering another solution to free management from administrative tasks to put their focus where it is most needed.

Target Demographic

In today's rapidly evolving restaurant landscape, operators face the challenge of navigating a myriad of technology solutions tailored to streamline their operations. Our app emerges as a complementary tool designed to enhance the functionality of existing systems rather than directly competing with current solutions. While many solutions focus solely on individual functionalities, our app is designed to integrate various tech solutions into one cohesive platform, making it easier for restaurant operators to access and manage the information that drives their business without having to do a costly overhaul of their current tech stack.

Our target market comprises a diverse range of restaurants eager to select their preferred technology solutions. These operators appreciate the importance of customizing systems to fit their unique operational needs while still wanting the convenience of consolidated reporting. For those currently committed to multiple tech solutions, perhaps locked into contracts, our app offers a seamless way to retain their existing systems without sacrificing accessibility to critical data. By centralizing reporting in one location, we alleviate the burden of juggling various platforms, allowing operators to focus on what truly matters: delivering exceptional dining experiences.

Additionally, we aim to engage high-level operators and clients of Benchmark Sixty - those who take a modern and proactive approach to data analytics within their establishments. Our app provides insights into key performance indicators such as Cost Per Labor Hour (CPLH), Sales Per Labor Hour (SPLH), and blended wage metrics, setting us apart from other providers in the industry. By analyzing these data points, operators can make informed decisions that drive their business forward.

Furthermore, our app serves as a comprehensive training solution for restaurants aiming to enhance their staff development. By centralizing training materials, offering direct performance feedback, and providing customizable training manuals and Standard Operating Procedures (SOPs), we enable restaurants to elevate their staff training without the need to start from scratch.

MARKETING PLAN

POSITIONING

**You are losing at least \$25K in profit.
We find it in 14 days or you pay nothing.**

**Using your existing data systems and team
No changes required**

15 MINUTE PROFIT DIAGNOSIS

In 15 minutes we show you exactly where you are losing money using your real data live

It is with great enthusiasm that we submit our business plan for Forge & Flow, a forward-thinking software company designed specifically to revolutionize the restaurant industry. We are excited to seek funding that will enable us to finalize the development, launch, and scale our innovative proprietary mobile application, paving the way for an enhanced user experience and transformative impact in the restaurant industry.

Forge & Flow was founded on the principle of merging cutting-edge technology with deep industry expertise. Our platform serves as a unique KPI dashboard and learning center, built to address the most critical pain points currently facing hospitality professionals. By harnessing the power of data and technology, our app empowers operators to move beyond reactive habits and transition into a proactive, data-driven management style.

We believe that Forge & Flow is positioned to become an essential utility for the modern restaurant. Our business plan outlines our robust market entry strategy, competitive advantages, and the financial projections that demonstrate our path to profitability and sustainable growth. We are confident that Forge & Flow will set a new standard for operational excellence in the restaurant sector.

Thank you for your time and for considering our proposal. We welcome the opportunity to discuss this request in more detail and to provide any additional documentation you may require. We look forward to the possibility of partnering to bring this vision to fruition.

A handwritten signature in blue ink, appearing to read 'Vanessa Gallegos', is written over a horizontal line. The signature is stylized with long, sweeping strokes.
